*"Change is a constant"*

## Overview of the AS 9100 D Standard

If your company is an aerospace supplier, developing and maintaining an AS9100 D certified Quality Management System is a requirement for participation in the aerospace industry. And, as of June 2017, your organization cannot be recertified to the previous AS9100:2008 Standard. You must start to transition to the newly released Revision D, with a deadline of achieving certification by September 2018.

So, the clock is ticking. A good first step for your management team as well as your entire work force is to participate in AKA's Management Overview Training Class for AS9100 D. It is a four-hour review of the new AS9100 D Standard with special emphasis on the transition or changes from the previous Standard to the new Standard.

Participants in the Overview Training will learn the following items:

- Overview of the requirements of the new Standard,
- Transition points made from the 2008 standard to the new "D" Standard,
- "Risk and Opportunities" emphasis,
- Product safety emphasis and requirements in the new Standard, including the emphasis on counterfeit parts,
- Requirement for identification of stakeholders and their interests in the organization,
- Requirement for establishing "Human Factors" protections for employees,
- Changes in "Design and Development" requirements,
- Among other areas.

For more information about this class or to attend one of AKA's other class offerings, contact Advantage Kentucky Alliance.
