Assessment of the QMS

AKA offers an assessment of your Environmental Management System in accordance with the ISO 14001:2015 Environmental Management Standard. This is an audit/review of your organizations' processes to determine if a company is compliant to the ISO 14001 International Standard. And, it can also be a pre-audit of your EMS, prior to your organization submitting for a certification audit to become registered to the ISO 14001 Standard.

The purpose of the ISO 14001 Standard is to strike a balance between the environment, society and the economy, striking a sustainable compromise to allow for a continuance of business while doing our best to protect the environment and resources. This is done by identifying energy and material uses throughout the organization, and working to reduce them through the establishment of waste management techniques to utilize resources efficiently.

The standard is not just about the reduction of resource usage and pollution. Implemented effectively, it should have real cost savings for the organization. Additionally, it will:

- Protect the environment by preventing or mitigating adverse environmental impacts;
- Mitigate the potential adverse effect of environmental conditions on the organization;
- Assist the organization in the fulfilment of compliance obligations;
- Enhance environmental performance;
- Influence the way the organization's products and services are designed, manufactured, distributed, consumed and disposed using a life cycle perspective to prevent environmental impacts.

Objectives of the Assessment

- Determine the organization's compliance to the requirements of the ISO 14001 Environment Management Standard including the efficient and effective implementation of those requirements; and
- Identify the findings or non-conformances, to assess the organization's readiness for registration to the Standard. A written report is provided.
