Quick Changeover Sustainment Event

Quick Changeover is a systematic approach for reducing the amount of time between the last piece of the current production run to the first piece of the next job at full speed. In order to sustain QCO improvements and maintain an ongoing QCO program, a company needs to create systems to provide structure and support for their program.

This strategic level event is intended to help a company's management team define and design the customized QCO infrastructure and support systems that will work for their firm. An experienced AKA Lean expert will provide participants with an understanding of the structures, tools and techniques that can be used to sustain QCO programs. Then, AKA's Lean expert will facilitate the decision-making process in which participants specifically define the support system that will fit the company's unique culture and situation.

The QCO Sustainment Event provides a structured approach to defining and implementing the systems needed to Standardize and Sustain the company's QCO initiative. It also increases the "sticking power" of QCO improvements and long-term sustainability of the QCO initiative.

By combining the knowledge and experience of a AKA's Lean expert with participant's ability to customize systems for the company's unique circumstances and culture, The QCO Sustainment Event serves to align the management team and establish accountability for the QCO activities.

Components of an effective QCO program that will be discussed during the event include:

- Roles and responsibilities
- Use of documented internal and external checklists
- Audits frequency
- Communication boards (departmental and plant); use of competition boards
- Consequences for deficiencies
- Inclusion of QCO involvement and performance into employee reviews, reward systems and recognition programs
- The capture and communication of QCO ideas and improvements.

“Establishing the long term systems and support for sustainability of your QCO program”
