Electrical Safety

This four-hour interactive workshop is designed to help participants support a system of continuous improvement within their organization by teaching them a disciplined approach to electrical safety.

It is intended as an essential guide for employees working on or around equipment powered by electricity. The course provides quick, expert advice on the most critical workplace safety issues caused by electricity according to OSHA Standard 1910.331.

"Don't get zapped!"

Upon completion of the workshop an operator will:

- Know the dangers of electricity in their facility
- Know how to keep themselves safe
- Know how to ensure their follow workers are safe.
- Recall key electrical terms which are essential to understanding Electrical Safety

They will also be able to identify:

- Electric shocks, arcs and blasts
- Fault current and potential difference
- Electrical safety in industrial plants

The company will provide the classroom and refreshments for participants and the AKA trainer.
