Lean Six Sigma Project Selection Workshop

Successful implementation of a Lean Six Sigma Program is significantly dependent upon effective allocation of resources and focus on the most impactful activities. Project Selection can make or break an improvement program.

This workshop helps guide management through a process to assure these objectives are accomplished. Generating high impact projects consists of performing a Project Selection Process (“PSP”) to identify the company’s areas of concern; those areas where significant business problems or opportunities exist. The Opportunity Analysis is performed through two primary approaches: 1) by identifying any and all opportunities perceived by the management team and 2) by identifying specific problems which are preventing the accomplishment of specific goals and objectives of the organization.

The methodology of the PSP will create a fertile and highly structured list of projects linked to strategy and projected benefits (dollars) that are then organized by area and responsibility. Assisting the PSP methodology is a process for defining projects, assuring they are clearly written with all of the essential information to achieve meaningful results. The PSP is a complete methodology from project ideation to project definition, selection and ongoing management through the business improvement roadmap.

The Advantage Kentucky Alliance trainer will deliver the following learning activities and tools.

- Lecture with overheads
- Project Selection scenarios
- Workbooks for participants
- Discussion and interaction
- Questions and answers

Benefits of the Project Selection Workshop

Upon completion of the Project Selection Workshop, participants will:

- understand the pitfalls of poor project selection ;
- be able use Project Selection Process (PSP) to identify opportunities;
- perform an Opportunity Analysis;
- link the Lean Six Sigma project methodology to dollars;
- create a meaningful list of potential projects.

The Company will provide the classroom and refreshments for participants and trainer.
